

SOFT SKILLS FOR DATA SCIENTIST

TEACHER TAMARA'S CLASS

@Shruthi Jain

Communication

They must communicate their findings to business users and decision-makers and explain what value these insights can bring to the business.

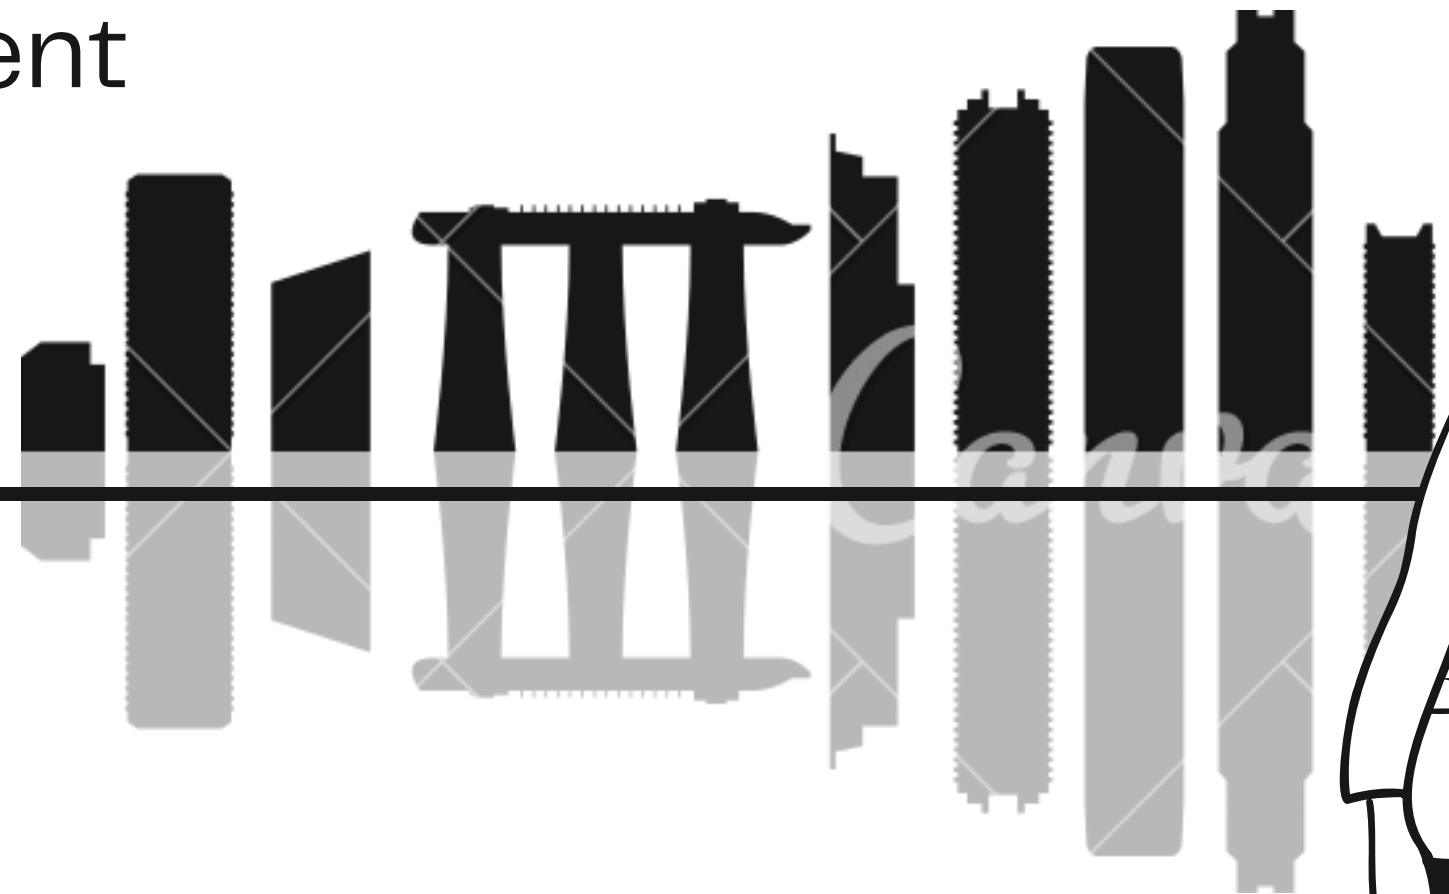

Curiosity

Curiosity is a trait that makes data science more interesting and beneficial. being curious about business problems will let you to the solution as well.

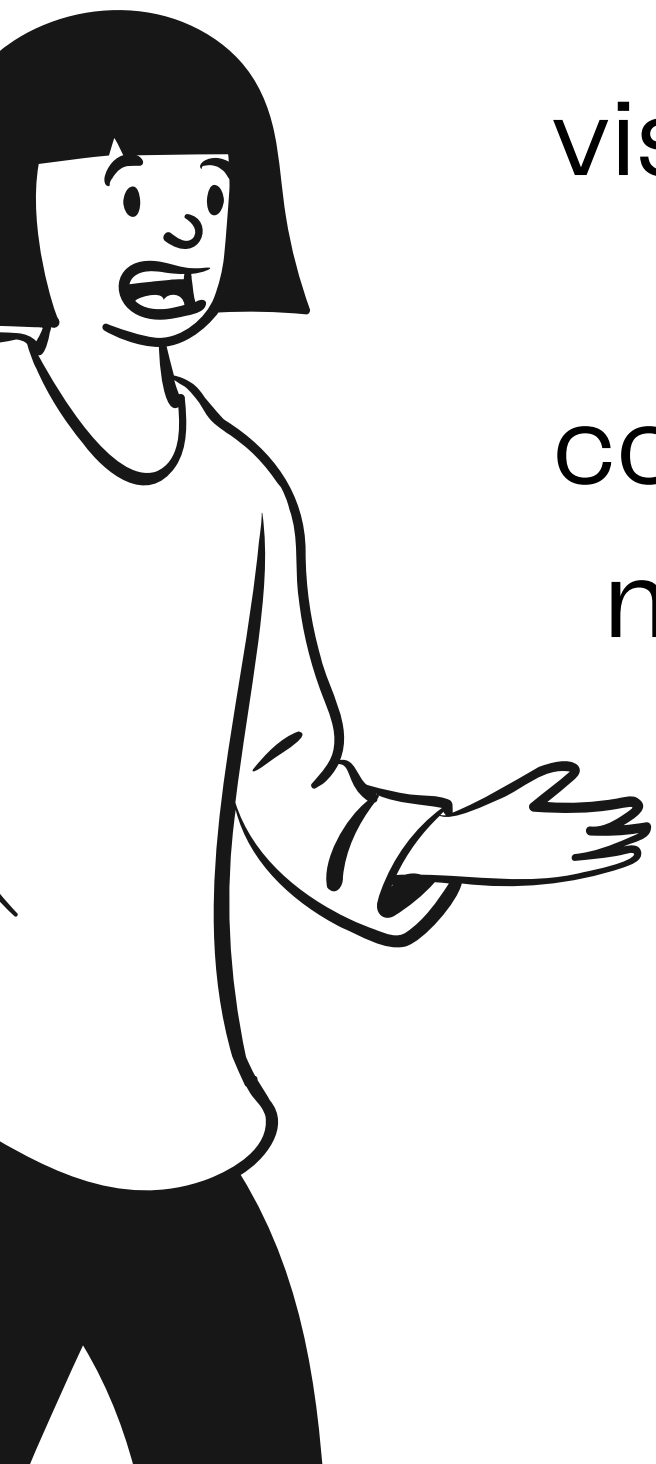

Business Acumen

Having business acumen and knowledge of business operations helps you to understand the business position as your audience and help you to effectively communicate with them and to present what they should know for making a business decisions.

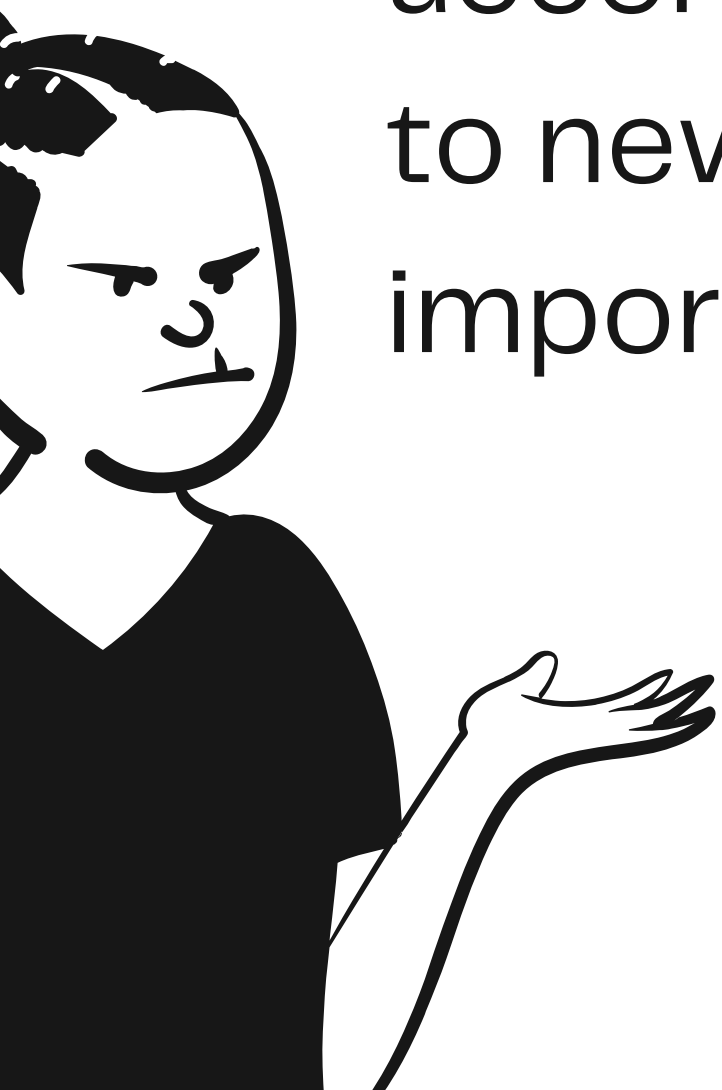

Storytelling

Storytelling aids data scientists in conveying their results coherently and understandably. It takes data visualization to another dimension, allowing decision-makers to see things from a new perspective. A compelling storytelling approach builds a strong data narrative where stakeholders attain a new sense of clarity and identify the best course of action.

Adaptability

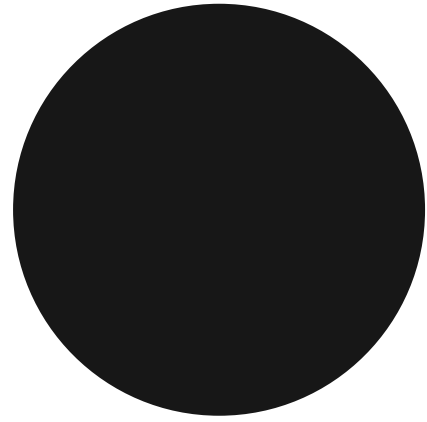

Technological stack and tools used are something which will always change as time goes by and going according to the trend and adapting to new skills and tools is very important.

Team Player

Data Scientist most of them works in a team setting and Being a team player is always important. Data scientists should always listen to their team members for their input and take it into consideration to work as a team.

Lifelong learning

This point goes hand in hand
with adaptability and one
should always come into this
field with a mindset of always
learning new things and
upskill.

Lets Upskill Ourselves
