

A few metrics and techniques

"Intersection-over-union"

$$\text{IoU}(B_p, B_a) = \frac{B_p \cap B_a}{B_p \cup B_a}$$

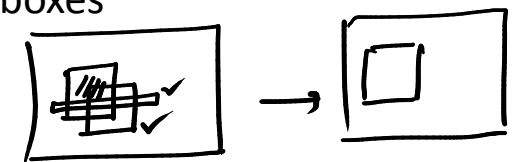

* blue → ground truth
* yellow → predicted.
→ "metric"

"Non-max suppression"

remove duplicate overlapping bounding boxes

$(B_p, \hat{p})$ * Blue → 0.95 ✓
* Red → 0.65 X
* Yellow → 0.40 X

$$| \mathcal{P} \geq \frac{1}{2} \text{ or } \mathcal{P} \geq 0.6 |$$
